# SAP Business ByDesign Integration

Integrating SAP Business ByDesign with business software

SAP Business ByDesign is feature-packed cloud-based ERP system, designed to streamline, consolidate and manage critical business information in one platform. Integrating SAP Business ByDesign with other business systems will help will eradicate repetitive data entry, improve business efficiency and reduce costs.

## The Problem

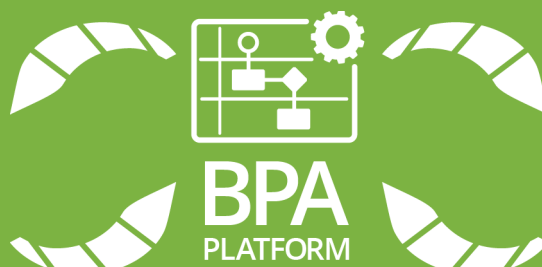

SAP Business ByDesign is a powerful ERP solution providing the majority of requirements that businesses need. However, to ensure that everyone has full visibility of essential data it needs to be integrated with other cloud-based or on-premises business solutions.

## The Solution & Commercial Benefits

Codeless Platforms' BPA Platform can quickly and simply integrate SAP Business ByDesign through its drag and drop integration, workflow and process automation capabilities to improve the visibility of information and increase employee productivity.

- Improvement in profitability
- Significant reduction in processing times
- Eradication of repetitive data entry and associated human errors
- Ability to scale the business without significantly increasing employee numbers

## Integrating SAP Business ByDesign with other systems and services

SAP Business ByDesign is an extremely comprehensive product, providing a range of functionality that companies require. However, if you are using an additional third-party system, such as accounting, CRM, eCommerce or warehouse management system, then Codeless Platforms' SAP Business ByDesign Connector can quickly and easily provide the integration between them.

The Connector can also be used to integrate with tertiary software and web-based services such as courier and despatch companies, payment services, communication tools (email, SMS, marketing), supplier databases, credit checking services and data suppliers etc.

### Business process automation across multiple systems

Once your business systems are integrated, Codeless Platforms' SAP Business ByDesign Connector can automate a wide-range of repetitive business processes that are unique to your business.

Data can be automatically transferred between systems, such as customer data, orders, payments and reports, providing SAP Business ByDesign with the most relevant, up-to-date information required. This helps to improve business efficiency and reduce costs. Automated notifications, via email and SMS, can also be added to the system, providing the ability to automate the distribution of order status updates, stock level warnings and delivery alerts etc.

### Workflow that starts and ends outside of SAP Business ByDesign

SAP Business ByDesign is a cloud ERP solution that provides users with full visibility of their workflow processes. Yet, if a workflow process starts or ends outside of SAP Business ByDesign users are not automatically included in the management or contribution process.

Codeless Platforms' BPA Platform and its multi system, bi-directional workflow capabilities enable organisations using SAP Business ByDesign to quickly create workflows that start or end outside of SAP Business ByDesign. This ensures users have the ability to contribute to decisions regardless of where a workflow begins or ends.
