UPS Integration

Integrating UPS with business software

By integrating UPS with your business software you will remove repetitive data entry, optimise delivery costs and significantly increase employee productivity. Isn't it time you enjoyed the commercial benefits of automation?

The Problem

UPS is a leading courier service and is used by thousands worldwide. However, placing orders with this service for the majority of businesses is still a repetitive, manual employee process. Losing valuable employee time and money to this repetitive administration task is a business pain many businesses could live without.

The Solution & Commercial Benefits

Codeless Platforms' UPS Integration Connector automates the flow of information between UPS and your business software.

- Reduction in order-to-fulfilment costs
- Significant decrease in order-to-dispatch times
- Elimination of data entry errors
- Increased employee productivity
- Ability to process more business transitions without increasing employee numbers

Pushing orders from business software to UPS

Order fulfilment is a critical element of your business operations. In fact, you have a dedicated employee or dispatch team that manually extracts orders from your business software and places them with UPS for fulfilment. It's a repetitive job but it needs to be done.

Codeless Platforms' UPS solution will automatically extract orders from your business software and seamlessly place them with UPS for fulfilment.

Pulling information back from UPS

UPS provides you with a wealth of valuable information such as tracking numbers and delivery notifications. But putting that information to good use needs more valuable employee time and administration.

Codeless Platforms' UPS solution will automatically pick up tracking numbers and publish them to your customer portal, eCommerce solution or send them to customers via email or SMS. It can also record proof of delivery into your business software.

Placing orders with UPS or another provider

It's common for businesses to use UPS and other courier service providers simultaneously. Factors such as geographical destination, fulfilment speed or package size/nature all influence which courier businesses opt for. Needless to say, an employee makes the choice and subsequently wastes time manually conducting the order fulfilment process.

Codeless Platforms' UPS solution will automatically identify which orders need fulfilling and, depending on the business rules you set, place an order with the most economical/suitable provider. Basically, automation keeps costs down and saves time.
